

TRELINO®

HOW
TO...

Instruction Manual

Welcome to the Trelino® family!

We are happy that you have chosen our product. Trelino® is more than just a mobile composting toilet. It's your freedom to go, your "just like at home" feeling on the road, your conscious decision for sustainability and your personal statement against chemical toilets.

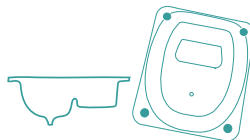

Make every place your favorite place and explore the world!

Your scope of delivery

Body
with lid

Separator with
integrated toilet seat

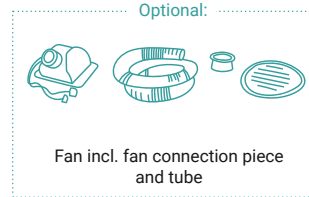

Urine canister, lid
with odor trap, and closed lid

Solids bucket
with lid

Compostable
bags

Product details

Product details of each individual Trelino®, dimensions and material information can be found on our website: <https://mytrelino.com/collections/all>

Instructions for using your Trelino®

Assembly

Our composting toilets can be used mobile as well as permanently installed. For mounting, it may be necessary to drill into the material. In case of a permanent installation, please make sure that the toilet has a firm stand, is sufficiently secured during travel and cannot fall over.

First steps

The Trelino® composting toilet is a toilet for mobile use and is delivered already pre-assembled. Please take care that the bucket and canister are in place after transport and make sure that the odor trap is still fixed in the lid and has not slipped into the urine canister.

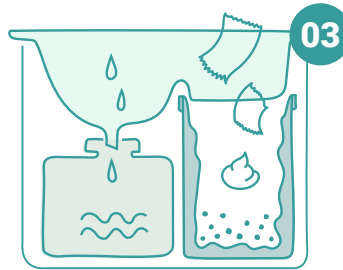

Let's go:

Place a bag
in the
solids container

Place one cup
full of litter
into the bag

Liquids in front,
solids & toilet paper in the back,
dispose of hygiene products separately

Place one to two cups
full of litter over the
solids after each use

Use and care

Open the lid, take out the separator insert and position the solids container and the canister properly in the body. Before first use, line the container with a (compostable) garbage bag and optionally place two handfuls of litter inside. Now your Trelino® is ready for use. Dispose of used toilet paper in the solid waste container. After the big business, spread litter over the fresh poop to facilitate the drying process and prevent the formation of unpleasant odors.

Only use Trelino® in a seated position.

Good to know

- We recommend the use of one of the following litter materials to achieve the best results and maximise the drying process: Coconut coir bricks, fine wood shavings (e.g. Aspen Bedding), saw dust, organic peat moss, peat and hemp mixes, or pressed wood pellets.
- Check the fill level of the urine canister and solids container at regular intervals to prevent overflowing.
- Only use the solids container with a garbage bag for hygienic emptying.
- Observe the maximum load of 330 lbs.
- The membrane in the open lid of the urine canister serves as spill and odor protection and should always be used.

Emptying instructions

When the container is full, remove the bag, close it tightly and dispose of the solids in the household waste. If compostable toilet paper is used, conventional composting is also possible. Empty the urine canister in a toilet connected to the sewage system. We recommend that you inform yourself about the local disposal regulations.

Cleaning

We recommend vinegar concentrate diluted with water (1:7) for cleaning the separator insert, solids container and canister. Rinse the urine canister with the solution after each emptying to prevent the formation of urine scale and unpleasant odors. For particularly stubborn deposits, vinegar concentrate can also be used pure. **Cleaning with pure water is not recommended, as this can cause the formation of odors and urine scale.** After cleaning, allow the urine canister to dry thoroughly.

The separating insert can be wiped with toilet paper after each use of the toilet to prevent urine residues. For simple, natural cleaning of all individual parts of the separation toilet, ph-neutral

Good to know

- Do not use chemical cleaners or sharp-edged objects on the surfaces such as solvents, scouring agents, milk/sponges, etc.
- Empty the urine canister regularly (after 3 - 4 days at the latest)
- Warm temperatures accelerate the decomposition process of compostable garbage bags. Ensure regular emptying
- Containers and accessories are not suitable for the dishwasher or washing machine and must not be placed in running water

Important hints

- Opening and closing the lid slowly and carefully to avoid pinching fingers
- Young children should not use Trelino® unsupervised
- Do not use Trelino® as a step, ladder, ladder substitute or staircase

Safety Instructions

General

- Put the lid on slowly and carefully to avoid pinching your fingers.
- Do not use Trelino® as a step, ladder, ladder substitute or stair.
- Filling litter is not suitable for consumption.
- Avoid direct contact of hands with eyes after littering.
- Trash bags are not toys! Keep them away from children due to the risk of suffocation.
- Caution! The lid of the toilets contains magnets. These can influence the function of pacemakers and implanted defibrillators!
- Trelino® is designed for sanitary use only. Do not use the composting toilet for transporting liquids, food or animals.
- Good to know: The wood we use is a natural material. Slight optical deviations on the surface underline the individual character of your Trelino® and do not represent a quality defect.

Use

- When sitting on the toilet seat, make sure that the solids inlet is at the back and the urine outlet is at the front.
- Use the container and the canister only for the intended excreta.
- Small children should not use the dry composting toilet unsupervised.

Cleaning and care

- Do not use sharp or pointed objects on the surfaces.
- Do not clean the surfaces with solvents, scouring agents or scouring pads.
- Do not expose the wooden lid to permanent moisture. We recommend sealing it with oil or varnish before first use.
- Do not use water for rinsing, otherwise urine scale will form. Instead, use diluted concentrated vinegar (1:7) or diluted citric acid.
- Dispose of urine and solids according to the instructions. Please also observe regional regulations.
- For hygienic emptying, use the solids container only with a waste bag.
- Never dry containers and accessories in the microwave or oven!

Things to know about No.1 & No. 2

Can I dispose of hygiene products in the solids bin?

No. As with conventional toilets, tampons, pads, diapers and the like do not belong in the potty but separately in the household waste.

If I use some toilet paper for cleaning after doing No. 1 and throw it in the solids bin, do I have to use some litter as well?

Yes. The paper is damp after use. In order to keep your leftovers in the solid waste container in dry wipes, cover the toilet paper with a handful of litter.

Can I use my separation toilet even if I have diarrhea?

Don't worry. Your Trelino® can handle it! If the business turns out to be more liquid, simply use more litter to optimize the drying process.

How do I find the optimal seating position?

The key here is: the proof of the pudding is in the eating! You can optimize your sitting position by leaning forward and backward and changing the angle of your legs. A little tip: The more upright your posture, the better your aim.
